TITLE: DOCUMENT PROCESSING SYSTEM

PUBN-DATE: January 10, 1991

INVENTOR-INFORMATION:
NAME
KURATA, ATSUSHI

INT-CL (IPC): G06F015/20

ABSTRACT:

PURPOSE: To prevent an unauthorized approval processing from being performed and to enhance a document managing system by comparing an input name with a registered name, and synthesizing and outputting an approval code or an approval mark in a document

CONSTITUTION: When a user name and a password are inputted, an approval processing part 1 refers to a user definition file 2, and judges coincidence between an input user name and the registered name 2A. When coincidence is obtained, the processing part 1 judges whether or not an inputted password coincides with a password 2B corresponding to the file name 2A on the file 2, and permits the execution of the approval processing when the coincidence is obtained. When the approval processing is executed, the approval code or a regular approval mark is entered in a prescribed approval stamp describing area in a document display area on the screen of a display part 7. Therefore, no approval processing is permitted even when a user not having the right of approval action recognizes the user name 2A having the right of the approval action unless the user recognizes the password 2B accurately following the name.

Abstract - FPAR:

PURPOSE: To prevent an unauthorized approval processing from being performed and to enhance a <u>document</u> managing system by comparing an input name with a registered name, and synthesizing and outputting an <u>approval code or an approval</u> mark in a <u>document</u>

Abstract - FPAR:

CONSTITUTION: When a user name and a password are inputted, an approval processing part 1 refers to a user definition file 2, and judges coincidence between an input user name and the registered name 2A. When coincidence is obtained, the processing part 1 judges whether or not an inputted password
coincides with a password 2B corresponding to the file name 2A on the file 2, and permits the execution of the approval processing when the coincidence is obtained. When the approval processing is executed, the <u>approval code</u> or a regular approval mark is entered in a prescribed approval stamp describing area in a <u>document</u> display area on the screen of a display part 7. Therefore, no approval processing is permitted even when a user not having the right of approval action recognizes the user name 2A having the right of the approval action unless the user recognizes the password 2B accurately following the name.
